

# QUICK INSTALLATION GUIDE

This document describes the basic steps required in order to start working with the XVC encoder and decoder.

The minimum settings required are the network parameters.

Once set, the unit will be accessible through the web browser.

For additional procedures and information please refer to the XVC Encoder user manual.

# Step 1

Install the XVC management tool. Follow the wizard instructions (Please download the configuration tool from www.xvtec.com/software-update/)

# XVTEC\_configTool - InstallShield Wizard Wekcome to the InstallShield Wizard for XVTEC\_configTool The InstallShield(R) Wizard will install XVTEC\_configTool on your computer. To continue, click Next. WARNING: This program is protected by copyright law and international treates. Cancel

# Step 2

Connect video sources to the unit (optional)

#### Step 3

Connect the Ethernet cable to the encoder

# Step 4

Connect the power supply

#### Step 5

The power led turns on after approx. 3 secs. The unit boot time is approx. 30 secs, after which the unit will respond to commands

#### Step 6

Run the management tool. The tools discovers and lists all XVC devices on the network.

## Step 7

In order start working with the unit, the IP should be set to match your network configuration.

In the management tool, right click a unit and select Set IP

Set the IP parameters (STATIC/DHCP) and the rest of the network parameters based on your network settings. Press Apply

## Step 8

In the management tool, double click a unit in order to launch the web browser. A verification pop-up will appear. The defaults are:

- a User name admin
- b. password admin

The main page of the XVC encoder/decoder will appear.

## Step 9

To start streaming please refer to the user guide for the next steps. Download the user guide from:
